DETAILED ACTION

Applicants preliminary amendment canceling claims 1-12 and adding new claims 13-25, Paper No.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 13-22 and 24, drawn to an isolated nucleic acid fragment encoding a thiamin pyrophosphokinase, vectors and host cells comprising, and methods using said nucleic acid fragment, classified in class 435, subclass 194.
- II. Claims 23 and 25, drawn to a transgenic plant and method of making said transgenic plant, classified in class 435, subclass 194.

For each of inventions I and II above, restriction to one of the following is also required under 35 USC 121. Therefore, election is required of one of inventions I-VI and one of inventions (A)-(D).

- (A). SEQ ID NO: 1 or a sequence encoding SEQ ID NO: 2.
- (B). SEQ ID NO: 3 or a sequence encoding SEQ ID NO: 4.
- (C). SEQ ID NO: 5 or a sequence encoding SEQ ID NO: 6.
- (D). SEQ ID NO: 7 or a sequence encoding SEQ ID NO: 8.

The inventions are distinct, each from the other because of the following reasons:

Inventions (A)-(D) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, represent structurally different polypeptides and the polynucleotides encoding them. Therefore, where structural identity is required, such as for hybridization or expression, the different sequences have different effects.

Inventions I and II are structurally unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the nucleic acid encoding the thiamin pyrophosphokinase of Group I and transgenic plant of Group II each comprise a chemically unrelated structure capable of separate manufacture, use and effect. The nucleic acid of Group I is comprised of nucleic acid sequence. The transgenic plant is a living organism comprised of nucleic acids, amino acids, fatty acids and carbohydrates.

Because these inventions are distinct for the reasons given above and the search required for Groups I-II are not coextensive, restriction for examination purposes as indicated is proper. *"For purposes of the initial requirement, a serious burden on the examiner may be prima facie shown if the examiner shows by appropriate explanation either separate classification, separate status in the art, or a different field of search as defined in MPEP 808.02."* (see MPEP 803).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
